US Liner Company Introduces ECOTEX, a New Sandwich Panel with Recycled Core

US Liner Company (a Division of American Made, LLC), a Cranberry Twp, PA based manufacturer of glass reinforced thermoplastic composite sheet is proud to announce its latest green initiative, ECOTEX. This glass reinforced composite is manufactured by laminating Versitex skins on to a chopped long fiber polypropylene and glass core.

Michael LaRocco, President of US Liner states, “Our goal has always been to create value for our customers through new innovations. ECOTEX is an example of how we blend a reinforced recycle core product with our standard Versitex material to create a unique hybrid product that is Eco Friendly and cost effective. Our customers can find both strength and attractive pricing which can allow a low cost alternative to replace wood, steel, fiberglass, and other non-reinforced recycled materials.”

Jeff Meek, Director of Sales and Marketing, adds “We are trying to be creative to all the possibilities for such a durable material. It has similar attributes of Versitex, just a different manufacturing process. As this product line grows, US Liner will introduce a “buy-back” program to close the recycling loop for our customers.”

ECOTEX offers twice the impact protection of conventional fiberglass panels, is lighter in weight and costs less. Currently available in 3/16” thicknesses and widths up to 96” by virtually any length, ECOTEX sheets are ideal for applications in truck-trailers, cargo and storage containers, building and construction, recreational vehicles, automobiles and military structures and equipment.

Already supplying millions of pounds into the truck/trailer and refrigerated rail markets with Versitex materials, US Liner has developed relationships in the RV and intermodal container industries where customers have found US Liner composite material to be the answer to many pre-existing challenges. Our only limitation is imagination!

Headquartered near Pittsburgh, in Cranberry Township, PA, U.S. Liner Company, is a division of American Made, LLC, which was founded in 1983. Since 1998, the company has been a leading supplier of composite materials that are widely used in the truck/trailer market and supports an ever-widening range of applications in the automotive, RV, rail and intermodal transportation, building products, and military markets.
