US Liner Company Involved in Extensive Expansion

US Liner Company (a Division of American Made, LLC), a Cranberry Twp, PA based manufacturer of glass reinforced thermoplastic composite sheet is experiencing a 40% sales growth in 2010. To support this growth in business, the company is generating new local jobs, adding tens of millions of pounds of manufacturing capacity and has added a second 80,000 sq. ft. facility in Harmony, PA.

“It is exciting to know we are quickly becoming one of the larger manufacturing employers in the area,” comments Wirt Rodgers, VP of Manufacturing. “In fact, we can’t hire enough people fast enough! We plan to add a minimum of 70 new employees over the next 3-6 months from material handlers to machinery operators. US Liner provides a great opportunity for job security and career growth for those that work here.”

Michael LaRocco, President of US Liner says, “We strive to be a place where people want to come to work and truly see the difference they are making. US Liner has changed industries and we look for people who desire to be difference makers. If we can nurture that drive, we will all be very successful.”

Already supplying millions of pounds into the truck/trailer and rail markets with its Bulitex and Versitex materials, US Liner has developed relationships in the RV and intermodal container industries where customers have found US Liner composite material to be the answer to many pre-existing challenges.

Versitex provides three times the impact protection of conventional fiberglass panels, is lighter in weight and costs less. Available in a wide range of thicknesses and widths, and virtually any length, Versitex sheets are ideal for applications in truck-trailers, cargo and storage containers, building and construction, recreational vehicles, automobiles and military structures and equipment.

“We created a monster,” explains Jeff Meek, Director of Sales & Marketing. “Versitex simply is great material. The cost/performance value equation is second to none. Consequently our sales have exploded as Versitex replaces commonly used materials such as FRP and wood.”

Headquartered near Pittsburgh, in Cranberry Township, PA, U.S. Liner Company, is a division of American Made, LLC, which was founded in 1983. Since 1998, the company has been a leading supplier of composite materials that are widely used in the truck/trailer market and supports an ever-widening range of applications in the automotive, RV, rail and intermodal transportation, building products, and military markets.
